

[Wycliffe Wildlife Corridor](#) [1]

November 2001, February 2003

The Wycliffe Wildlife Corridor provides key winter range habitat for elk and deer (Class 1 and 2 winter range). This property provides habitat for the red-listed badger, the blue-listed Lewis's Woodpecker, long billed curlew and 8 red or blue listed plant species.

The riparian area contains well established Black Cottonwoods and other riparian vegetation includes red-osier dogwood, willow species and green alder. The combination of dry grasslands, moist depressions, river frontage and pine covered hilltops makes this property highly desirable as a wildlife corridor.

Location: St. Mary's Prairie

Year Acquired: 2001
