

[Section 2 Hazard Assessment and Control](#) [1]

The British Columbia Conservation Foundation's Hazard Assessment and Control Program is designed to provide a standardized process to identify foreseeable hazards in the workplace, determine risk, and implement appropriate actions to eliminate or control the risk of incidents.

All BCCF employees and contractors are required to take a proactive approach to managing and reporting hazards. If hazards are identified during the project that were not anticipated in the planning phase, the employee/contractor is required to stop work and ensure appropriate controls are in place.
